- **Irrigation Management Support**
- **Food and Farm Connections – Small and Specialty Crop Agricultural Support**

Extension Washington's Water

Welcome to Washington's Water

The focal point for Washington State University's statewide water resource programs. The Washington's Water web site is presented by the Water Resources Leadership Team, charged with the mission to provide statewide leadership, support, and coordination for the water resource educational efforts of WSU Extension.

On April 22, 2004, the WSU Extension Water Quality Management Team was disbanded by unanimous approval of the [Team](#). This event immediately preceded the creation of the WSU Extension Water Resources Team and the WSU Extension Water Resources Leadership Team.

A new structure was developed that we hope will be more inclusive of faculty/staff who are not part of the WRLT. This will take the form of requesting any/all interested WSU Faculty/Staff to be part of the WSU Extension Water Resources Team - who will advise the WR Leadership Team on w county programs.

Our continuing goal will be to provide statewide leadership and support for the many water resources related programs occurring across the State.
